

Example of imaging methods

Bitstream Disk Imaging

Practical Example:

During a corporate fraud inquiry, authorities confiscate the suspect's computer hard drive. A specialist generates a bitstream image encompassing the complete disk.

Enables retrieval of:

Removed emails.

Documents deleted on purpose.

Erased browsing records.

Files concealed in unallocated areas.

Why it's used: This method is essential to maintain every piece of information on the device for comprehensive examination and possible court presentation.

Example of write blocker configuration

Hardware Write Blocker Configuration on a Seized Hard Drive

Scenario:

Police seize a SATA hard drive in a financial fraud case.

Procedure:

The expert connects the drive to the physical write blocker.

The write blocker is connected to the forensic workstation.

It is verified that the device is in Read-Only mode.

The following is documented:

Write blocker model.

Serial number.

Date and time of use.

The hash is calculated before and after the acquisition.

why is it used

It prevents the operating system from automatically modifying metadata such as the last access date
